

Design and Technology Statement of Intent

At Beaver Green Primary School we believe that Design and Technology plays a pivotal part in daily life. Our pupils use their mathematical, science, art and computing skills to solve real and relevant problems that will enable them to confidently make valuable contributions to society. We aim to give our children Design and Technology experiences that they can take forward into the workplace and wider community. We work closely with the local area and our extended school family to give our pupils enriching, authentic opportunities.

We value cross-curricular experiences with subjects, including Science, Technology and Mathematics. We encourage our children to be independent and ambitious thinkers who are inspired to take on new challenges in our ever changing society. As part of our curriculum children will develop curiosity and knowledge about Design and Technology, including prominent designers from around the world.

At Beaver Green we value the practical nature (cooking, product design, construction etc) of Design and Technology encouraging all of our children to freely and actively engage with the subject and develop their imagination and creativity.
